## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14, 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fulton et al. in view of Yankner et al. (US Pat. 6,080,778).

Fulton et al. disclose that Galanthamine is effective for treatment of Alzheimer's disease (See entire document).

Yankner et al. disclose the administration of statins for treatment of Alzheimer's disease (Column 3, lines 20-53).

WO 95/06470 disclose that Alzheimer's disease is the most common type of dementia in the United States (Page 1, lines 23-24). A method of treating Alzheimer's disease with a HMG-Co A reductase inhibitor, such as lovastatin, simvastatin, pravastatin and fluvastatin (Page 3, lines 25-35, Pages 4-8, Page 9, lines 1-31).

The prior art discloses the treatment of Alzheimer's disease with Galanthamine. The difference between the prior art and the claimed invention is that the prior art does not expressly disclose the combination of Galanthamine and statins for treatment of Alzheimer's disease. However, the prior art amply suggests the same as the prior art disclose that both are effective for treatment of Alzheimer's disease. As such, one of ordinary skill in the art would have been motivated to combine the prior art with the expectation that the combination would be effective

Art Unit: 1616

for treatment of Alzheimer's disease. Further, one of ordinary skill would have been motivated to use various amounts, including the amounts claimed, depending on the effectiveness of the treatment of Alzheimer's disease.

The Examiner has duly considered the Applicant's arguments but deems them unpersuasive.

The Applicant presents the Declaration of Joan Amatniek as evidence of synergism. However, the evidence is not commensurate in scope with the claims. The claims are not limited to Alzheimer's dementia but encompass any type of dementia. The declaration only shows the use of 24 mg of galantamine. See In re Clemens, 622 F.2d 1029, 1036, 206 USPQ 289, 296 (CCPA 1980) (Claims were directed to a process for removing corrosion at "elevated temperatures" using a certain ion exchange resin (with the exception of claim 8 which recited a temperature in excess of 100C). Appellant demonstrated unexpected results via comparative tests with the prior art ion exchange resin at 110C and 130C. The court affirmed the rejection of claims 1-7 and 9-10 because the term "elevated temperatures" encompassed temperatures as low as 60C where the prior art ion exchange resin was known to perform well. The rejection of claim . 8, directed to a temperature in excess of 100C, was reversed.). See also In re Peterson, 315 F.3d 1325, 1329-31, 65 USPQ2d 1379, 1382-85 (Fed. Cir. 2003) (data showing improved alloy strength with the addition of 2% rhenium did not evidence unexpected results for the entire claimed range of about 1-3% rhenium); In re Grasselli, 713 F.2d 731, 741, 218 USPQ 769, 777 (Fed. Cir. 1983) (Claims were directed to certain catalysts containing an alkali metal. Evidence presented to rebut an obviousness rejection compared catalysts containing sodium with the prior art. The court held this evidence insufficient to rebut the prima facie case because experiments limited to sodium were not commensurate in scope with the claims.).

Page 4

Further, there is insufficient evidence to establish that there was a synergistic effect with respect to the combination of galantamine and statin; significantly, the original trials were not designed to ensure sufficient statistical power to asses the effect of statins, administration of statins was heterogenous with respect to specific statin, dose and treatment duration and follow up was limited to 5 to 6 months which may be insufficient for comparing effects of statins and galantmine (See Page 60 of Winblad et al. which is the evidence cited by the Declarant as supporting the conclusion of synergy).

Therefore, the claimed invention, as a whole, would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made, because every element of the invention has been collectively taught by the combined teachings of the references.

## Conclusion

A facsimile center has been established in Technology Center 1600. The hours of operation are Monday through Friday, 8:45 AM to 4:45 PM. The telecopier number for accessing the facsimile machine is 571-273-8300.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frank Choi whose telephone number is (571)272-0610. Examiner maintains a compressed schedule and may be reached Monday, Tuesday, Thursday, Friday, 6:00 am - 4:30 pm (EST).

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's Supervisor, Johann R. Richter, can be reached at (571)272-0646. Additionally, Technology Center 1600's Receptionist and Customer Service can be reached at (571) 272-1600.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pairdirect.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
